EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The claim 1 is allowable over the prior art of record because the teachings of the references taken as a whole do not show or render obvious the combination set forth, including:

An apparatus for handling sheets containing information thereon, comprising:

a movable sheet transfer member having a transfer surface which contacts a selected one of the sheets containing the information thereon so as to transfer the selected sheet along a transfer direction;

a sheet supporting surface area...

an information reader...

as seen in a view direction which is perpendicular to both of a thickness direction and the transfer direction of the selected sheet, a tangential line, at a boundary point of the transfer surface of the sheet transfer member from which the selected sheet starts to separate from the transfer surface of the transfer member, extends in a side area of an imaginary straight line passing through the boundary point and the information reading point so as to intersect the sheet

Art Unit: 3651

supporting surface area at a position between the boundary point and a furthest extent of the information reading range from the boundary point;

wherein the boundary point corresponds to a point at which the sheet transfer member contacts the selected sheet; and wherein the boundary point and the sheet supporting surface area are spaced from each other in a direction perpendicular to the imaginary straight line, and the selected sheet is pressed against the sheet supporting area at a position between the boundary point and the information reading range...

in combination with the rest of the claim language is not taught or fairly suggested by the prior art.

The claim 9 is allowable over the prior art of record because the teachings of the references taken as a whole do not show or render obvious the combination set forth, including:

An apparatus for handling sheets containing information thereon, comprising:

a movable sheet transfer roller having a transfer surface for contacting a selected one of the sheets containing the information thereon and transferring the selected sheet along a transfer direction...

a sheet supporting surface area...

an information reader...

the information reading range including an information reading point at which the information contained on the selected sheet is read...

a press roller opposing the sheet transfer roller such that the selected sheet can be pressed between the sheet transfer roller and the press roller at a boundary point on the selected sheet in a press direction,

wherein an imaginary straight line passing the boundary point in a direction perpendicular to the press direction intersects the sheet supporting surface area as seen in a view direction perpendicular to a thickness direction and the transfer direction of the selected sheet, and

wherein the pressing direction is parallel to another imaginary straight passing the center of the sheet transfer roller and the center of the press roller...

in combination with the rest of the claim language is not taught or fairly suggested by the prior art.

The claim 21 is allowable over the prior art of record because the teachings of the references taken as a whole do not show or render obvious the combination set forth, including:

An apparatus for handling sheets containing information thereon, comprising...

a movable sheet transfer member being including a transfer surface for contacting a selected one of the sheets and transferring the selected sheet along a transfer direction...

Art Unit: 3651

a sheet supporting surface area...

the information reading range including an information reading point at which the information is read,

a distance detector facing the selected sheet for measuring a value changing in accordance with a change in distance between the selected sheet and the information reader;

wherein the information reader includes a light emitter for projecting a light to the selected sheet and a light receiver for receiving the light reflected by the selected sheet to read the information contained on the selected sheet from the selected sheet, and

wherein the light emitter is controlled in accordance with the value such that an intensity of the light emitted by the light emitter is increased in accordance with the increase of distance between the one of the sheets and the information reader...

in combination with the rest of the claim language is not taught or fairly suggested by the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
